

# Location 1

Non Vegan (Pre-Period Demeaned) — Observed vs. Predicted, with the Pre/post Averages

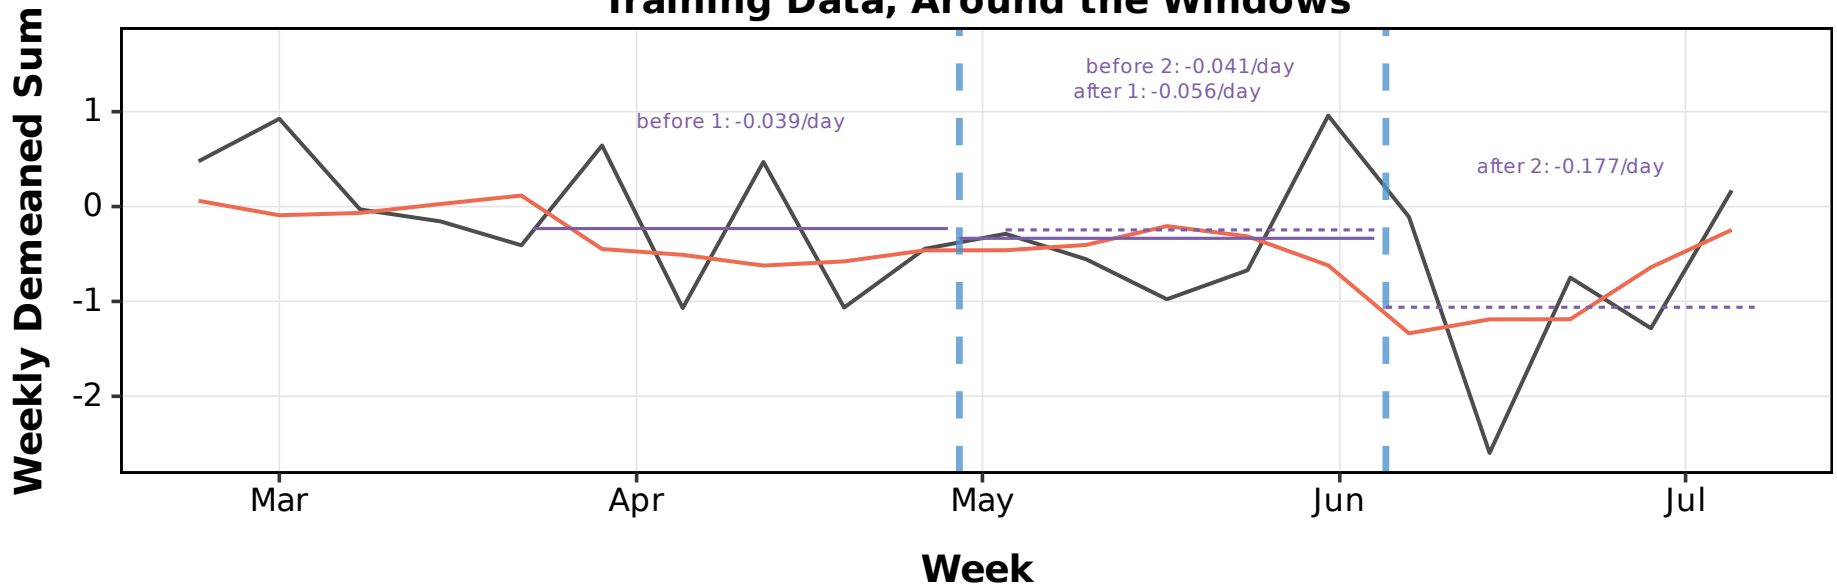

## Training Data

## Test Data

## Training Data, Around the Windows

— Observed — Predicted — Pre/post averages

Purple: each equal window's per-day average (written above it), drawn flat over the window's dates at the per-day average  $\times$  the days with orders in a normal week: 6, the most common count in a full training week.  
Bottom: the training weeks from four weeks before the windows to four after. Launch 1: Chicken roll; launch 2: Dragon wrap.  
The launches' windows overlap, so each launch's are segments of their own, the later dashed.
